Revision F to 2ZZP00001 Finish Specification for F-35 Weapons System

DISTRIBUTION WARNING: Distribution of this data is restricted to the entities listed in the REL TO statements.

Dear Valued Supplier,

Revision F of 2ZZP00001 was released March 1, 2017. The biggest change that we see is the tightening of the fuel tank coating thickness in table 1. Please see the thickness change in table 1 for AMS-C-27725. NGC recommends that you review all changes to the previous revision of the specification shown in the change index.

Please flow this change to your sub-tier suppliers that may be applying the fuel tank coating.

Note that this requirement is only in effect for purchase orders you have signed after or on March 1st, 2017. You may choose to incorporate this revision in current purchase orders but are not required to be in compliance with it on purchase orders signed prior to March 1st, 2017 per the NGC F-35 SQAR supplement section 16.

Sincerely,

Troy Conwell
NGC Supplier Quality Engineer
